

True or False – **CORRECT ALL FALSE STATEMENTS!!!**

1. T/F The term ordination we discussed in class refers to nothing more than the admission to the priesthood.
2. T/F Indirect ordination is the correct approach in cases where a single trend dominates the data.
3. T/F Direct ordination is the simplest approach to ordination.
4. T/F Ordination assumes that all variables are not of equal importance and that there are distinctions between variables.
5. T/F Multidimensional mathematic space where each variable represents a dimension
6. T/F Bray-Curtis is not sensitive to outliers
7. T/F Bray-Curtis can be performed by hand by a very quick and effortless process.
8. In Figure 4.4 what does the distance between the points mean?
